## Conventions

In this document we use the following typographic conventions:

Regular proportional font	→ Source text and input text
<i>„Italic proportional font“</i>	→ Path and file information
[Proportional font in parentheses]	→ Menu items and buttons
<b>Dark red bold font</b>	→ Important notes and warnings
<u>Pale blue underlined font</u>	→ Hyperlinks

## What does the Channable article export module do?

The Channable article export module allows you to transfer any number of articles from your OXID shop to the platform of Channable. From there, the articles can be loaded to many price search engines and marketplaces.

### **Your advantages:**

- Only one data feed for all price search engines and marketplaces
- Quick installation and configuration of the module
- A cron job is not needed on your shop server

## Minimum Requirements

- PHP 5.6 – 7.x
- OXID eShop Professional Edition/Community Edition in Version 6.x
- SSH-Access or local development environment
- Composer
- **Private** Git-Repository

## Installation

### 1a. Installation via Git (recommended):

- Unzip ZIP file
- Copy the contents of the folder to a **private** Git-Repository
- Execute the following commands in the OXID Shop Root Directory (Adjust the Git-URL):

```
composer config repositories.response/reschannable vcs
https://github.com/vendor/repository.git

composer require response/reschannable:dev-master
```

### 1b. Installation via ZIP-Archiv:

- Upload the ZIP-Archiv „install\_zip.zip“ to a Webspaces
- Execute the following commands in the OXID Shop Root Directory (Adjust the URL):

```
composer config repositories.response/reschannable zip
https://mydomain.com/install_zip.zip

composer require response/reschannable:dev-master
```

**Warning:** Please remove the ZIP-Archiv after a successful installation from the webspaces!

## 2. Activation of the module:

Activate the module after installation under:

„Extensions > Modules > Channable article export > Overview > Activate“

## User's Guide

### 1. Create and assign a category for the Channable articles:

Create a new category for your Channable articles (for example "Channable"). Activate the new category and tick "Hidden". Now copy the title of the new category into the module settings under "Extensions > Modules > Channable article export > Settings > Basic Settings" in the first input field. Any items you now assign to this category will be exported to Channable.

### 2. Module settings:

You can make some settings in advance for your data feed under "Extensions > Modules > Channable article export > Settings" to prepare it for Channable. Finer settings will then be made in your Channable account.

**Basic settings**

Channable  Enter the title of a category here. All articles of this category are exported. The category must be active and hidden.

Export only active articles. For variants, the main article is also checked.

Only export articles with images.

Only export articles with an EAN.

Export payment fees as net prices.

KE75EH44  Store Token

**Shipping settings**

Export shipping costs as net prices.

Shipping type filter on

DHL Versand  Shipping Policy  
Example:  
UPS Shipping  
DHL Shipping  
(Next Title of Shipping Policy)

Shipping Methods  
Example:  
Standard Shipping  
Express Shipping  
(Next Title of Shipping Method)

**Additional fields for fixed values**

interim => 0,00  
condition => neu  Enter an additional field per line here. The format is: index => value. The index can be up to 40 characters long. Special character, Umlauts and line breaks are not allowed in the index.  
shipping\_country => DE  
shipping\_service => Free shipping within Germany

**Settings for articles**

Export long description

Export SEO URL as list / category tree

### 3. Call your data feed:

You can view your data feed with the following URL

[http://domain.tld/maindirectory/index.php?cl=reschannable&fnc=reschannable\\_get\\_products&limit=100&page=1&storeid=0&shoptoken=STORETOKEN&jsonpretty=on](http://domain.tld/maindirectory/index.php?cl=reschannable&fnc=reschannable_get_products&limit=100&page=1&storeid=0&shoptoken=STORETOKEN&jsonpretty=on)

Replace **domain.tld/maindirectory** with your domain and the main shop directory if exists and **STORETOKEN** with the generated store token. The store token can be found in the module settings.

You can also find a direct link to the data feed in the module settings.

### Screenshot of the export:
