UNBEATABLELY DURABLE

Our everyday lives are full of the hustle and bustle of different activities. So it's all the more important that we have resilient flooring that keeps pace with all our needs. A Corepel floor effortlessly rises to the challenge.

■ A Corepel designer floor can withstand whatever life throws at it – children playing, pets romping around, objects falling – and still maintains its beauty.

With its Enhanced Wood Core embedded in high-performance resin, it is dimensionally stable, waterproof and resistant to scratches and dents.

The high share of wood contained in Corepel's core is exclusively from certified and controlled sources. And it's the first floor ever to meet the requirements set out in the DEC standard.

Corepel: the right choice in the long run.

WOOD SURFACE

Evolution Pure is the ultimate pioneering hybrid floor. It offers the aesthetics of real wood, while being waterproof and extremely durable.

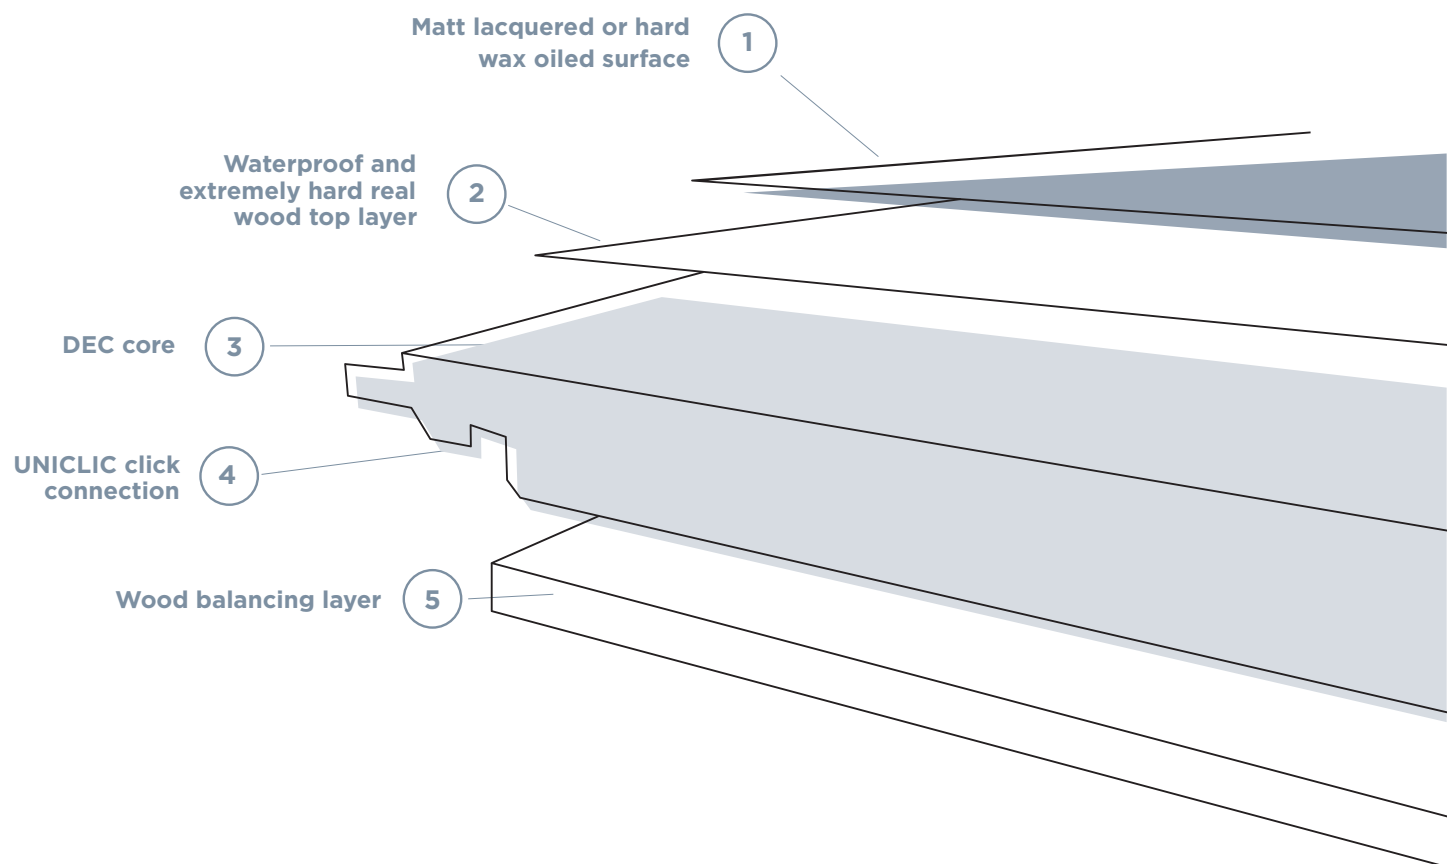

■ Our sophisticated technology combines a real wood surface and waterproof base at high temperatures and high pressure. The high-performance resin penetrates and saturates the surface from below. This makes it waterproof and much more robust than normal wooden flooring. In look and feel, it is identical to natural parquet, but it uses far less wood. While 1 m³ of oak only yields around 150 m² of 3-layer parquet, the same amount gives you 600 m² of Corepel Pure flooring – four times as much. The Uniclic connection ensures that the joins between the panels don't let water through, either. Corepel Pure can be glued or laid floating.

Corepel and BASF – working together for a lower carbon footprint

The core of Corepel Evolution Pure largely consists of natural wood. For the coating we use Kauramin® BALANCE, the biomass-balanced resin from BASF. In production, Corepel Evolution has a carbon footprint that is at least 30% smaller than comparable flooring.
