

The **wealthcare** experts

Headquartered in Hong Kong with presence in Singapore, Australia, Japan and India, Quantifeed is Asia's leading provider of digital wealth management solutions for financial institutions. Developed by a team with experience drawn from leading investment banks, Quantifeed's QEngine has been named Best Robo Advisor Solution by the prestigious Asian Private Banker magazine for three consecutive years. Its robo technology powers banks, insurers, brokers and wealth planners to provide simple, personalised, and engaging wealth management journeys. Combining software engineering and quantitative finance, we help transform financial institutions into providers of wealthcare, a customer-centric service focused on meeting everyone's wealth management needs. Business Analyst/Project Manager

Location: Hong Kong

Responsibilities

- Lead the delivery of QF platform to client environments through:
 - Ownership of features from requirements elicitation and documentation to solutioning, testing and delivery
 - Act as the communication bridge between clients and QF team for project requirement; managing stakeholder communications, status reporting, risks and scope
 - Liaise with various functional areas including Business, IT/Engineering, Audit and Compliance internally and externally
 - Prepare supporting documentations in different phases in the project lifecycles
- Engage in consulting exercises with clients to enable identification of their true needs:
 - Conduct client requirement workshop or training, if required
 - Align the needs of clients with existing platform features; facilitate discussions with UI/UX Design teams, Engineering teams and clients to identify pain points and provide recommendations to clients and internal stakeholders to achieve overall objectives
 - Organise feedback from clients and market analysis and feed into a roadmap of features for the QF platform
- Align technology with business strategy and goals by being at the core of all project interactions
- Manage multiple project timelines simultaneously
- Resolve and/or escalate issues in a timely manner

Requirements

- Minimum 5-10 years of experience in project management and/or product management
- Experience in managing client expectation and communications (written/verbal and face to face), strong relationship management skills and ability to effectively influence and lead multiple levels of organisation through functional boundaries
- Agile project management experience, strong facilitation skills for eliciting requirement and solutioning across multiple teams
- Documentations skills with experience in writing user stories, business requirement documents and functional specifications documents with focus on content and aesthetics
- The following are preferred skillsets:
 - Experience with Behaviour Driven Development and automation testing
 - Understanding of financial markets including wealth management products and trade flows (such as Funds, ETFs, Stocks)
 - Asia Regulatory understanding
 - Cantonese and/or Mandarin capability
 - Hands on technical experience, SQL, scripting or application development
- Excellent time management skills and ability to work under pressure
- Attention to detail and ability to provide strategic insights in delivery and continuous improvement
- Self-starter, hands-on solution provider, passionate problem solver with willingness to adapt and grow in a dynamic environment
- University degree in Information Technology/System, Computer Science / Engineering or related disciplines
